***Response to Arguments***

1. Applicant's arguments with respect to claims 1-33 have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Regarding amended claim 1, Applicant is claiming, "independently of the receipt of loss notification signals", which is not described in the specification. Claims 2-19 depend on claim 1, therefore claims 2-19 are rejected as well.

***Allowable Subject Matter***

1. Claims 20-33 are allowed over prior art.
2. The following is a statement of reasons for the indication of allowable subject matter:  
Although the combined cited prior art discloses a communication system whereby the receiver distinguishes between packets received with non-congestion bit errors, they fail to teach or suggest with respect to claim 20, a packet marking module coupled to receive PLB indications and to mark the respective previously-transmitted packets as potentially subject to PLB, and a verification module coupled to receive a packet loss indication corresponds to any of the

previously-transmitted packets that have been marked, and with respect to claim 30, a packet marking module coupled to receive at least a portion of the loss notification signal and to mark the packet as potentially subject to non-congestion based packet loss, and copying as many bytes from the non-congestion packet loss as can fit in the signal protocol packet in the network layer packet, setting a slow start threshold equal to a number of packets in flight until packet loss is acknowledged, dropping the signaling protocol packet if transport layer protocol in next header field is not among predetermined group of transport layer protocols, identifying a transport protocol in a next field, and incrementing a congestion window for each duplicate acknowledge received.
